1

GOALS

- Computer-assisted planning of craniofacial osteotomies based on optimal approximation to “normal” (i.e., average) skull shape
- Accurate intraoperative tracking and 6-dof positioning of bone fragments

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

2

Generations of CT-based Planning Programs

- ▶ **1st** - 3D "cut and move" simulators
- ▶ **2nd** - Adds fragment position optimization
- ▶ **3rd** - Adds automatic ranking of best surgical designs

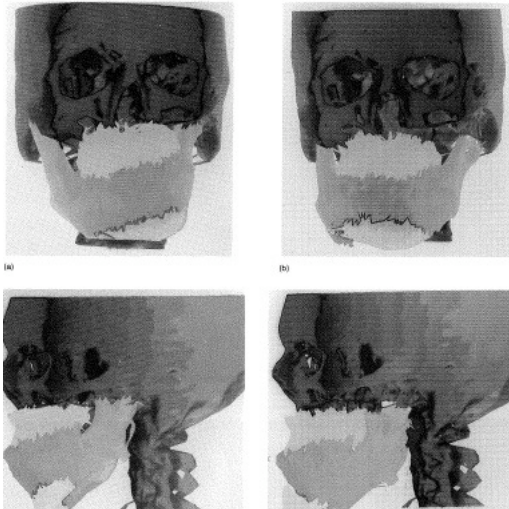

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Physical Simulators: Rapid Prototyping

L. Klimek, H.-M. Klein and R. Mosges, "Simulation of Surgical Procedures in the Craniofacial Region," in Computer-Integrated Surgery, R. H. Taylor, S. Lavallee, G. Burdea and R. Mosges, Eds. Cambridge, Mass.: MIT PRes, 1996, pp. 663-669..

7

Video Simulators

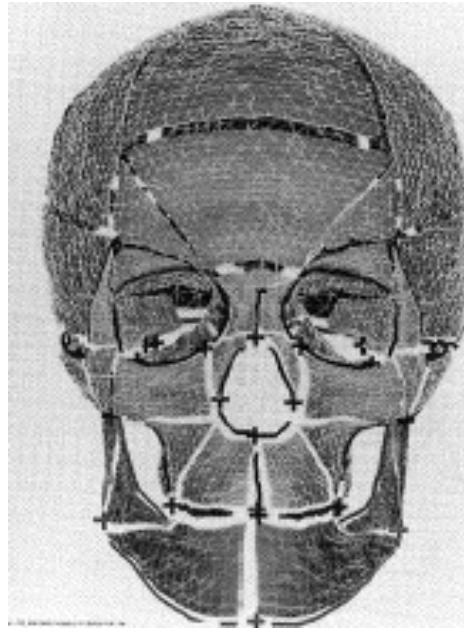

L. Klimek, H.-M. Klein and R. Mosges, "Simulation of Surgical Procedures in the Craniofacial Region," in Computer-Integrated Surgery, R. H. Taylor, S. Lavallee, G. Burdea and R. Mosges, Eds. Cambridge, Mass.: MIT PRes, 1996, pp. 663-669..

8

Computer mesh corresponding to Dr. Cutting's map

- Point landmarks
- Ridge curves
- Additional curves along geodesic lines between landmarks
- Triangular and quadrangular patches
- Take this data for many patients and average to make atlas

15

Optimization

Given models bone fragments corresponding to parts of an ideal skull, the computer minimizes a weighted sum of these three distance metrics

Engineering Research Center for Computer Integrated Surgical Systems and Technology

16

17

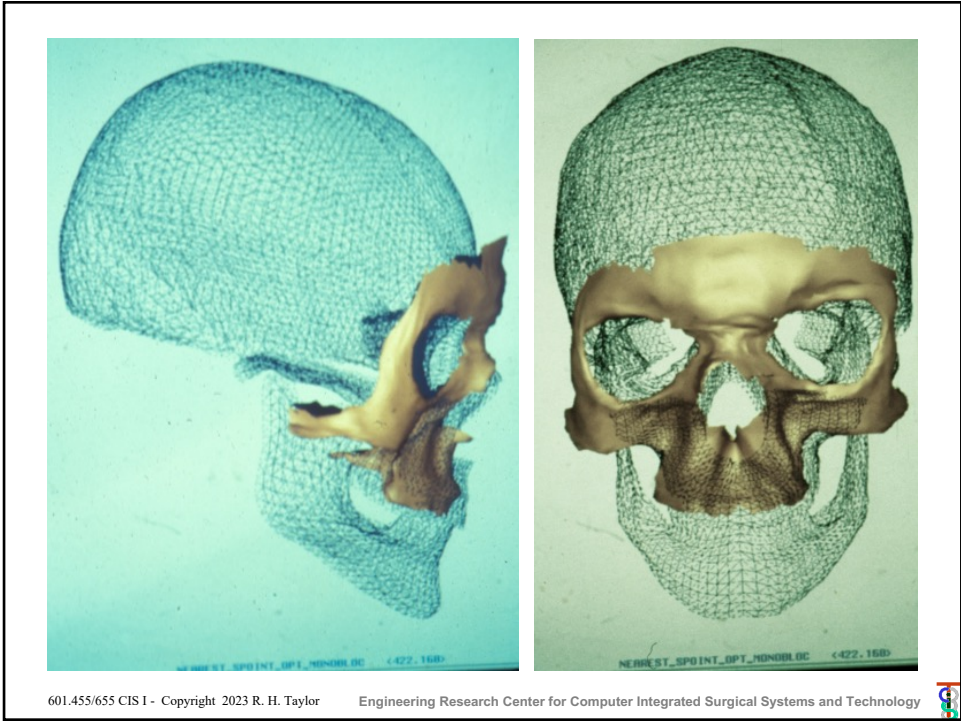

Automated Osteotomy Ranking

- Computer plans all common osteotomies
- Computer optimizes bone fragment motion and computes error score
- Systematically remove osteotomy lines one at a time in score order. Re-optimize positions and rescore
- Show clinician the plans
- Clinician picks desired plan and further refines based on anatomical/clinical knowledge

23

Tripartite Osteotomies

- Proposed by Converse in 1971 to improve flexibility in shaping the midface.
- Abandoned due to technical difficulty of fragment positioning and fixation

FIGURE 56-61. The tripartite osteotomy. A, Lateral view of the skull.

27

Third Move

601.455/655 CIS I - Copyright 2023 R. H. Taylor Engineering Research Center for Computer Integrated Surgical Systems and Technology

28

Enter robotics ...

- Surgeon **did not** want help in making the cuts.
- Surgeon **did** want help in positioning and holding the bone fragments
- Robots can do this

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

29

But there were some minor concerns ...

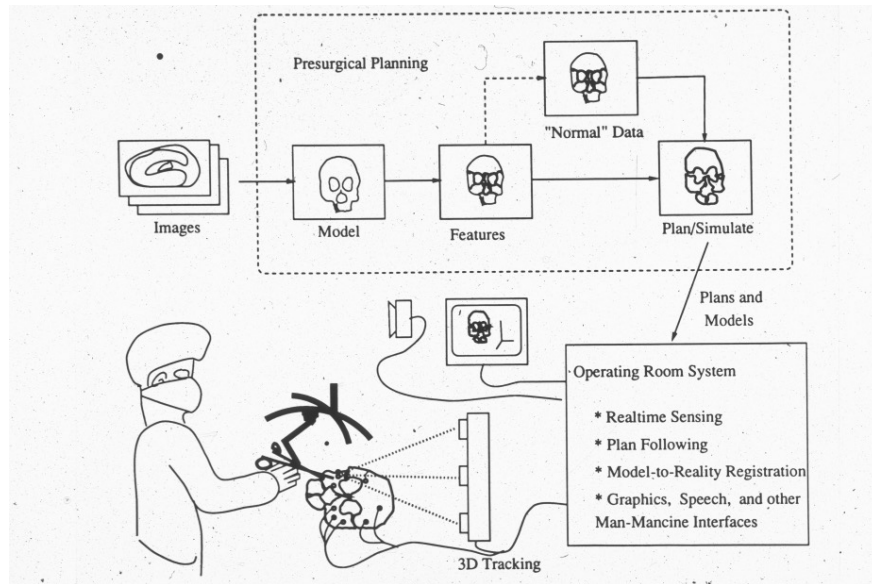

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

30

Our approach: navigation + passive manipulation aid

31

Optical tracking: NDI Optotrak

Three plane detecting cameras at different angles locate a point

Accurate (± 0.1 mm) tracking of infrared LED markers over approx 1 m^3 workspace

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

32

601.455/655 CIS I - Copyright 2023 R. H. Taylor

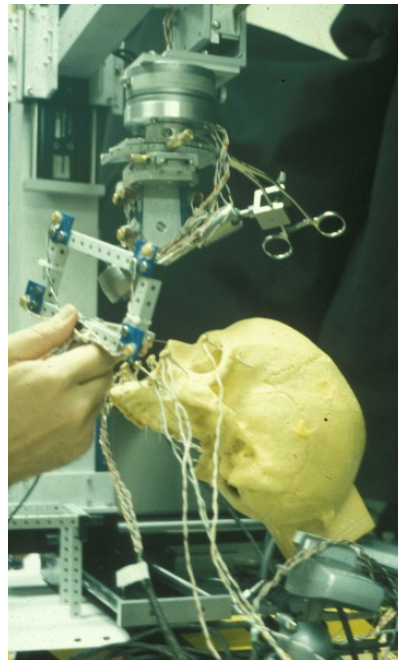

Engineering Research Center for Computer Integrated Surgical Systems and Technology

33

Passive Manipulation Aid

- LED markers on adjustable manipulation aid, pointer, and patient skull

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

34

Passive Manipulation Aid

- Adjustable surgical clamp holds bone forceps
- Six DOF motion with hand-set brakes
- Remote center-of-motion with iso-center in bone

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

35

Assembled system

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

36

Possible refinement: computer set brakes with audible feedback cue

- Computer tracked position of tool optically
- Electric particle brake set when reached target
- Computer played tone to give audible feedback when got close to alignment

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

37

Possible refinement: computer set brakes with audible feedback cue

Results

- Were able to achieve very good alignments (sub-mm)
- Very tedious to use
 - Brake was too slow
 - No “d-tent” effect

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

38

On to clinical use ...

- For legal reasons, the IBM hardware was not used clinically.
- Dr. Cutting was able to re-implement the tracking system using a PIXSYS optical tracker
- First case encountered equipment difficulties and was completed manually

601.455/655 CIS I - Copyright 2023 R. H. Taylor

39

2nd Clinical Case

601.455/655 CIS I - Copyright 2023 R. H. Taylor

Engineering Research Center for Computer Integrated Surgical Systems and Technology

40

2nd Clinical Case

- Patient had radiation therapy at relatively early age
- As a result bone around one eye socket failed to grow properly
- Goal was to fix this defect
