

Simple Search with Bounding Boxes

```
// Triangle i has corners [\vec{\mathbf{p}}_{i}, \vec{\mathbf{q}}_{i}, \vec{r}_{i}]

// Bounding box lower = \vec{L}_{i} = [L_{xi}, L_{yi}, L_{zi}]^{T}; upper = \vec{U}_{i} = [U_{xi}, U_{yi}, U_{zi}]^{T}

bound = \infty

for i = 1 to N do

{ if (L_{xi} - bound \le a_{x} \le U_{xi} + bound) and (L_{yi} - bound \le a_{y} \le U_{yi} + bound)

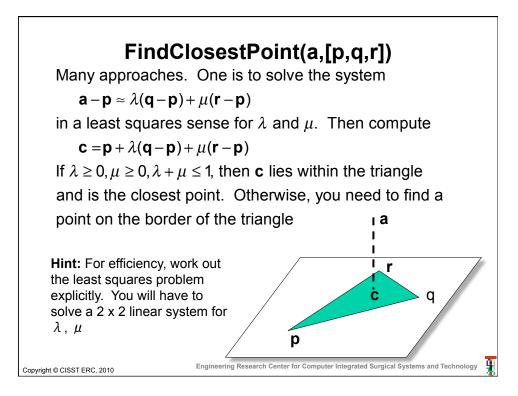

and (L_{zi} - bound \le a_{z} \le U_{zi} + bound) then

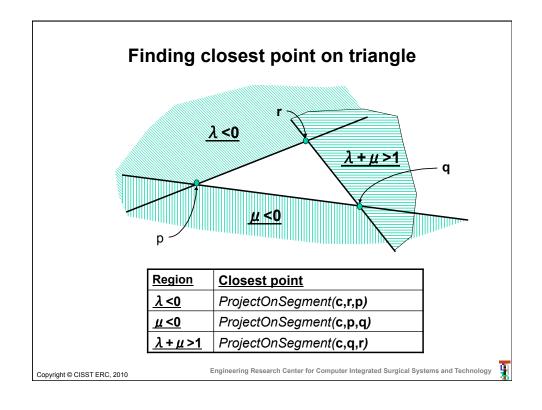

{ \vec{\mathbf{h}} = \text{FindClosestPoint}(\vec{\mathbf{a}}, [\vec{\mathbf{p}}_{i}, \vec{\mathbf{q}}_{i}, \vec{\mathbf{r}}_{i}]);

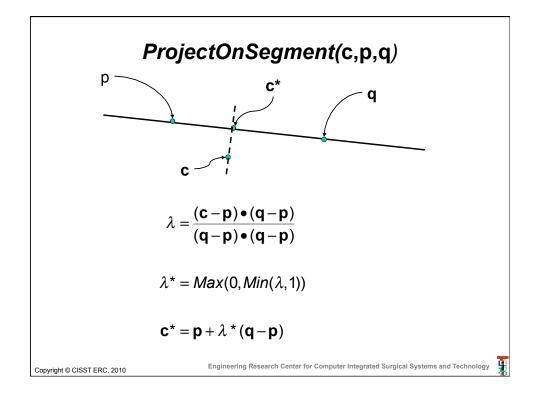

if \|\vec{\mathbf{h}} - \vec{\mathbf{a}}\| < bound then

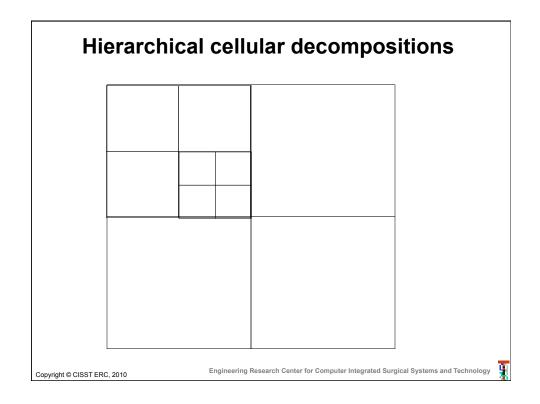

{ \vec{\mathbf{c}} = \vec{\mathbf{h}}; \ bound = \|\vec{\mathbf{h}} - \vec{\mathbf{a}}\|;};

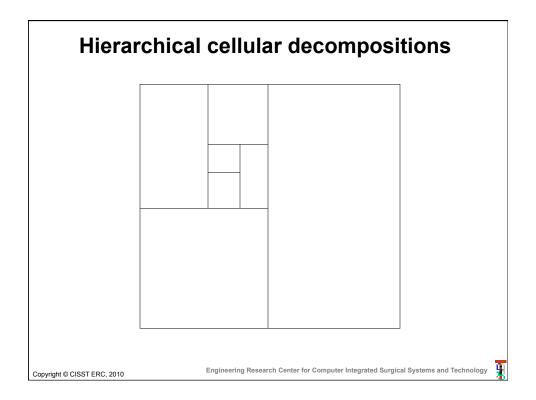

};
```

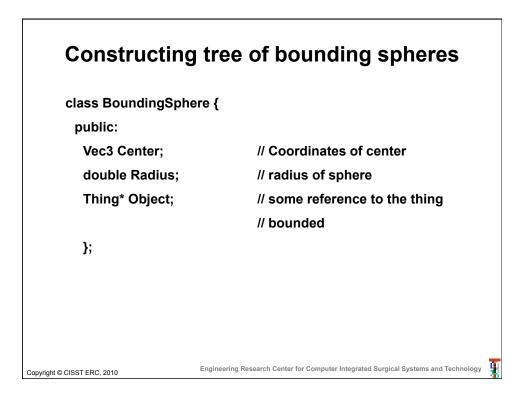

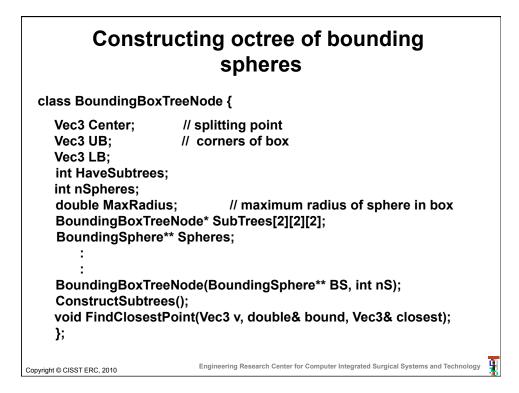

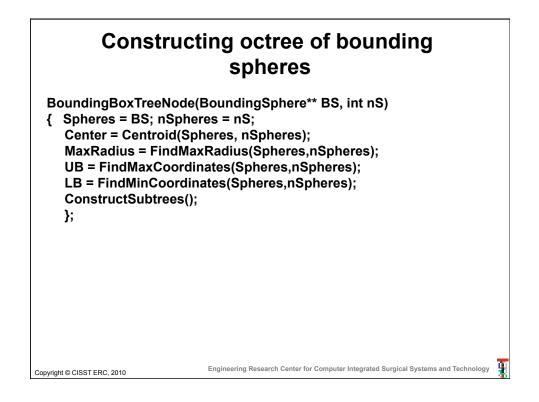

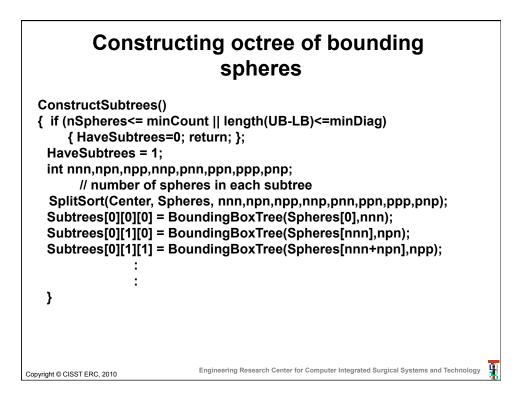

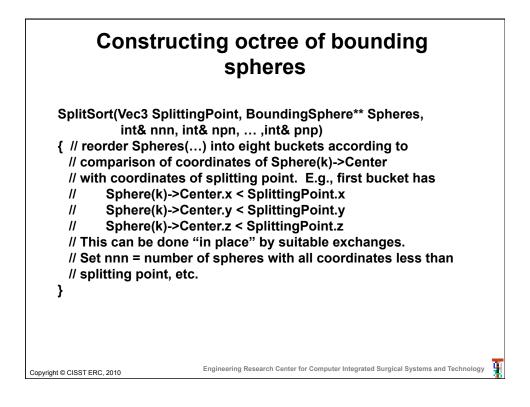

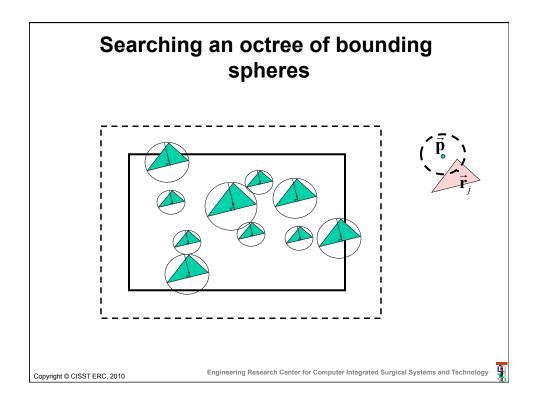

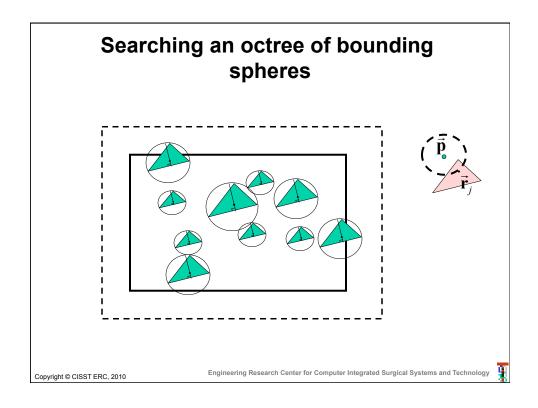

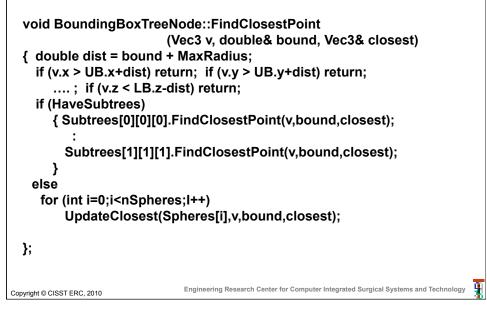

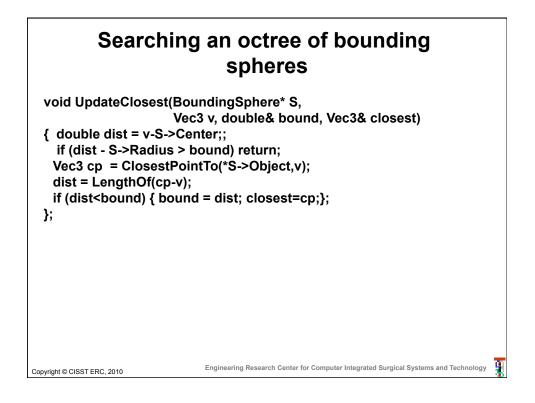

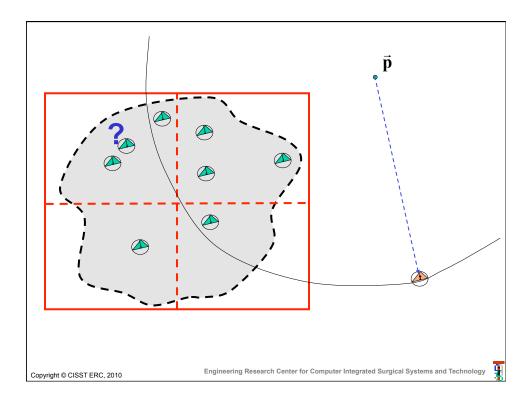

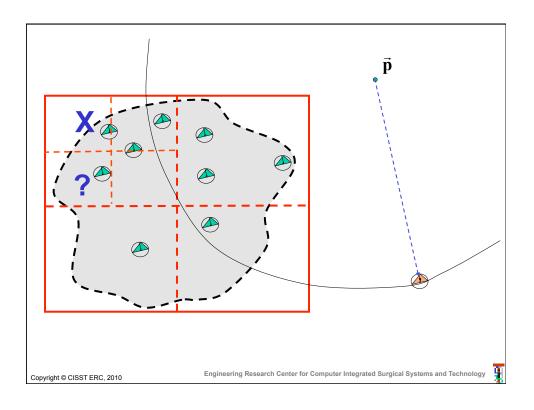

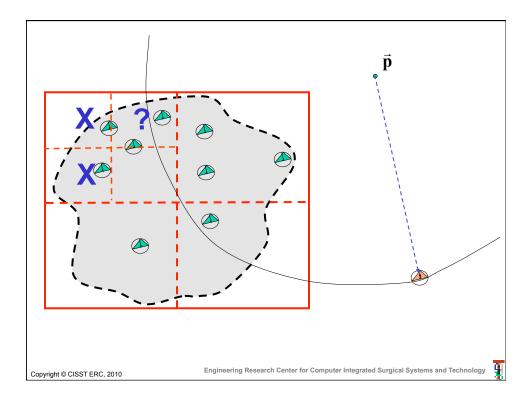

Searching an octree of bounding spheres

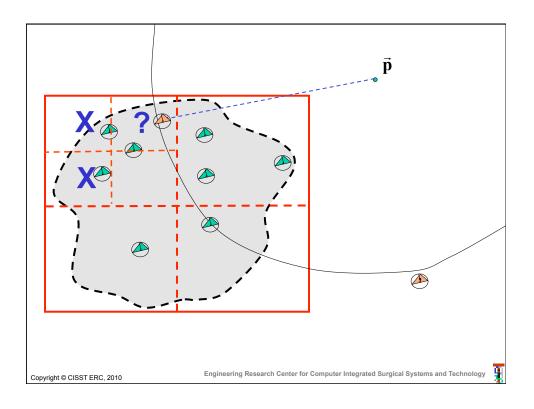

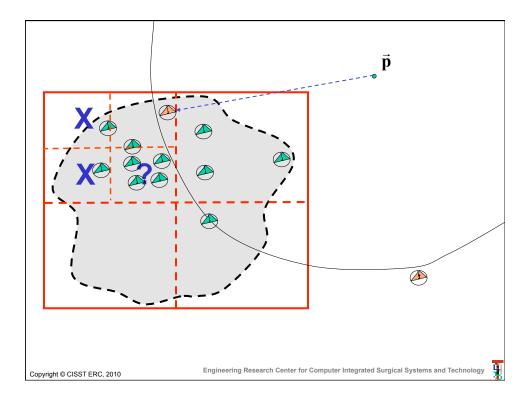

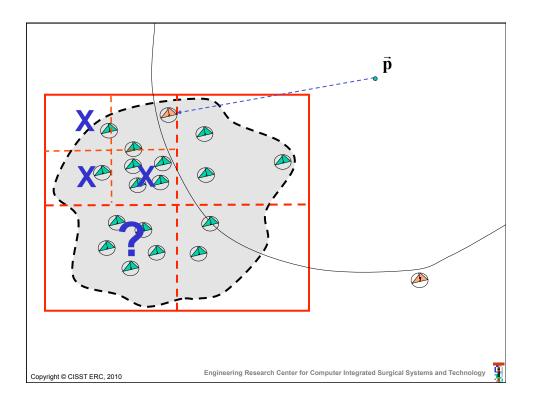

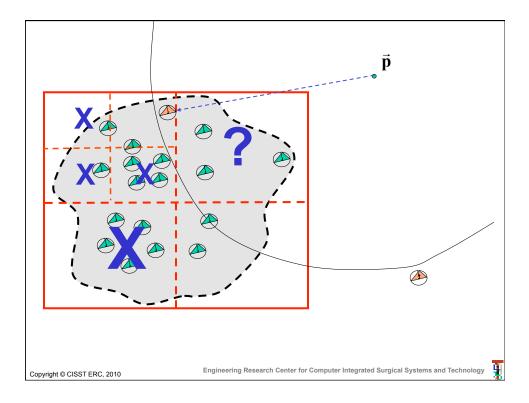

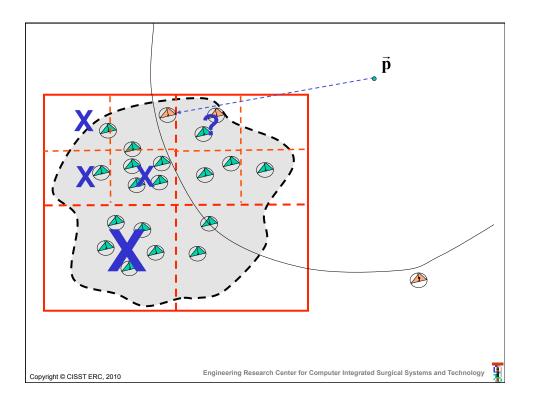

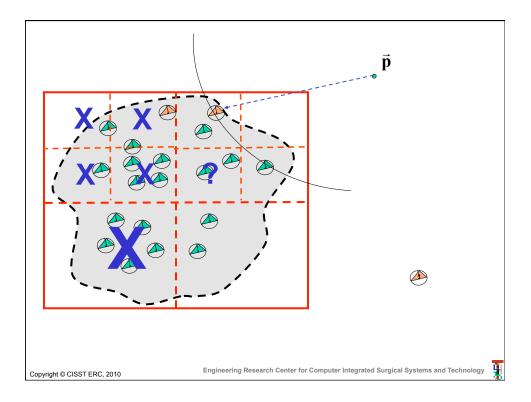

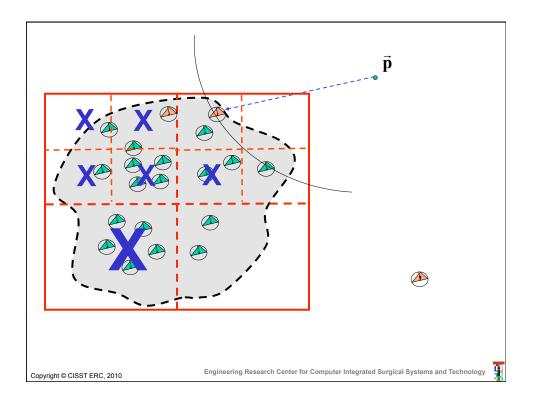

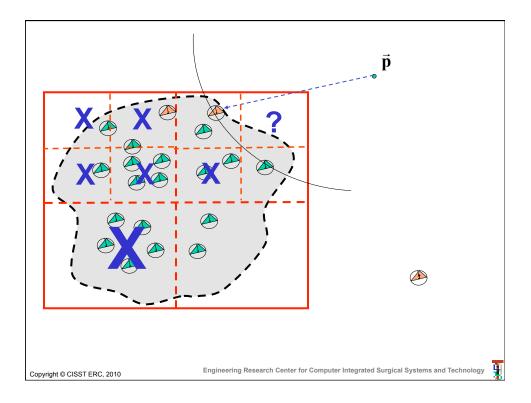

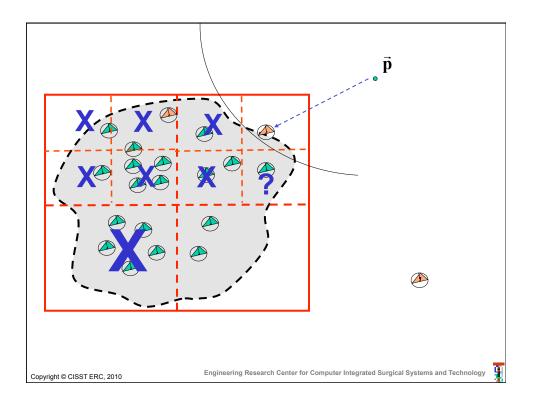

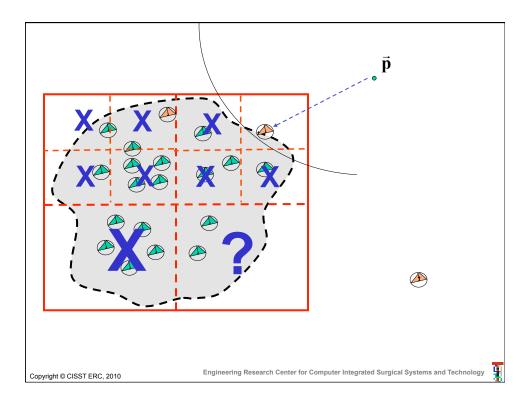

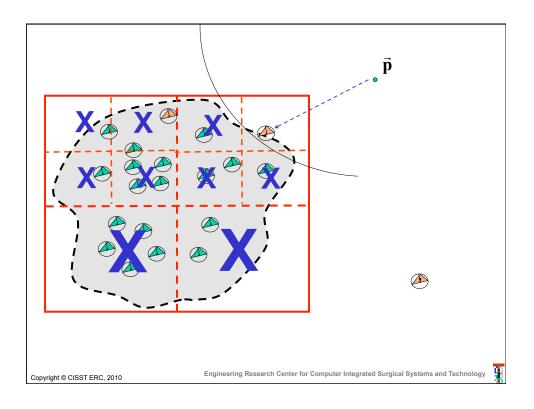

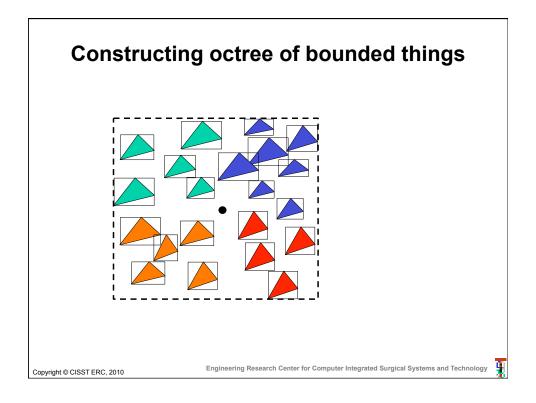

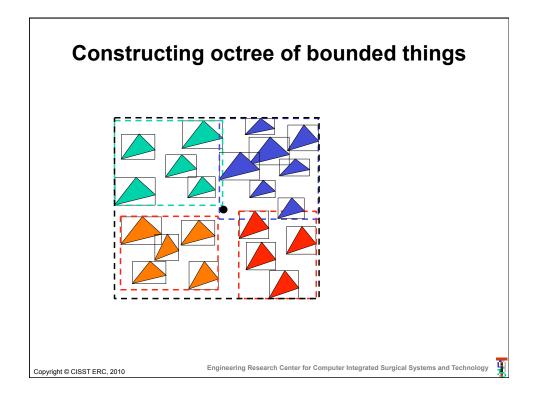

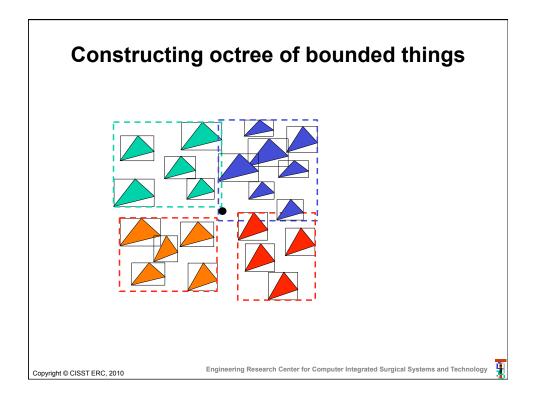

Constructing octree of bounded things	
class BoundingBoxTreeNode {	
Vec3 UB; // Vec3 LB; int HaveSubtrees; int nThings; BoundingBoxTreeNo Thing** Things; : :	/ splitting point / corners of box de* SubTrees[2][2][2]; de(Thing** BS, int nS);
	nt(Vec3 v, double& bound, Vec3& closest);
