Deformable Registration to SSM

- Step 1 For sample points, find closest matches to current mesh
- $\begin{array}{ll} \text{Step 2} & \text{Solve } \mathbf{F} \bullet \vec{\mathbf{d}}_{k} \approx \vec{\mathbf{q}}_{0,k} + \sum_{m=1}^{N_{\text{modes}}} \pmb{\lambda}_{m}^{\quad (t)} \vec{\mathbf{q}}_{m,k} \\ & \text{for } \mathbf{F} \text{ and/or } \pmb{\lambda}_{m}^{\quad (t)} \end{array}$
- Step 3 If change the shape parameters then update bounding boxes
- Step 4 Iterate to convergence
