# Photoacoustic System for Spinal Surgery Project Update

Group 03

Mentor: Muyinatu A Bell

Team Member: Blackberrie Eddins

## Project Summary

- Goals
  - Proof of Concept
  - Drill Tracking
  - Image Processing

Sensing + Robotics

PHOTOACOUSTIC & ULTRASONIC SYSTEMS ENGINEERING LAB

## Dependencies: Experiments

Dependency	Solution	Progress				
Drill Prototype	Search Lab, Drill existing piece	Solved				
Blood	IRB protocol	Solved				
IRB Protocol	Talk to Dr. Bell	Solved				
Lab Access	Talk to Dr. Bell	Solved				
Experiment holder for vertebra	Design/build one	Solved				
OPO Laser	Maintain OPO in Lab	Solved				
MATLAB scripts	Talk to grad students	In Progress				
LABORATORY FOR						

PHOTOACOUSTIC & ULTRASONIC SYSTEMS ENGINEERING LAB

# Dependencies: Tracking

Dependency	Solution	Progress
Phantom with pre-drilled hole(s)	Design/build	Have one without blood
CT Access/ training	Talk to Dr. Bell, grad students	Not started
CT Registration Algorithm	Use Eduardo's, or other existing	Not started

## Dependencies: Image Processing

Dependency	Solution	Progress
Knowledge of SLSC Imaging	Read papers, Dr. Bell	Read some
PA image data	Experiments	Started

## Dependency Updates

- Opotek Phocus OPO was misaligned
  - Weak and variable output
  - Hours of manual alignment
  - Technician secured loose part
- Blood samples easily acquired during week
- Have dry lumbar and thoracic vertebrae, as well as frozen whole spine samples with blood and tissue
- Data processing scripts were less accessible than anticipated
  - Just got scripts for the linear probe
  - In process of getting scripts for phase array

## **Blood Visualization**

- Very weak
  - Low energy
  - Small fiber
- Best visualization with multi hole drill tip
  - Widens beam

1 mm bone chip

#### Matched US Image

- Image taken with L3-8 Probe
- Difficult to see blood vessel boundaries with PA imaging

Blood vessel

#### Data Collection

- Phased array
- Fifteen frames taken as fiber moves through pre-drilled hole in bone

![](_page_10_Picture_3.jpeg)

![](_page_10_Picture_4.jpeg)

## Deliverables

- Minimum
  - See blood in PA image with fiber inserted into multiple drill tips.
  - Show how blood is visualized with different drill tips
- Expected
  - Tracking the drill tip as it is inserted into the spine (phantom).
- Maximum
  - Novel image processing methods to enhance PA images.

![](_page_11_Picture_8.jpeg)

#### Project Schedule

Goal	17-Feb	24-Feb	3-Mar	10-Mar	17-Mar	24-Mar	31-Mar	7-Apr	14-Apr	21-Apr	28-Apr	5-May	12-May
Get added to IRB													
Retrieve tissue samples													
Phantom design													
Begin experiments													
Solidify tracking plan													
Finish preliminary data collection													
Get CT access/training													
Start tracking experiments													
Finish tracking experiments													
Successful tracking													
Image Processing													

![](_page_12_Picture_2.jpeg)

#### Key Dates

- 1. Feb 24: Phantom Design finished
- 2. March 3: begin experiments
- 3. March 31 April 8: finish preliminary data collection
- 4. April 7 April 2: begin tracking experiments
- 5. April 28: tracking achieved
- 6. May 12: finish ALL experiments and image processing
- 7. May 16: project presentation
